Course Description: This course provides participants the opportunity to explore some of the most compelling issues facing educational workers and students in the community colleges. Like never before community college educational workers are challenged to redesign and redefine how to provide the best education to meet the needs of today's students, society and workforce. State-wide initiatives and legislation are directing colleges to get all students in the front door more efficiently and push them out the back door as quickly as possible. Data driven requirements and accountability are at an all time high. Participants will select one of three texts that both address and provide solutions for these issues; *Hacking Project Based Learning*, *Fostering Habits of Mind in Today's Students* or *Redesigning America's Community Colleges*. Communities of practice will be formed around ONE text and members will be invited to work collaboratively to design, implement and evaluate transformational strategies that directly address an issue in their classroom, campus or community. Classified staff, faculty, and administrators are all welcome to attend.
